

All-In-One Pest & Termite Control Program

A New Way to Control Pests

Our clients requested an every-other-month service. **WE LISTENED!**
They wanted year-round seasonal protection against pests. **WE LISTENED!**
They told us they preferred to use a monthly autopay system. **WE LISTENED!**
And they asked for one program for BOTH termites and all other pests. **WE LISTENED!**

That's why we developed our All-In-One Program that meets all these requests. On the back of this flyer are the details about the comprehensive program.

Check it out – then call us today. And remember, **WE LISTEN!**

*Your treatment schedule will vary depending on the date of your first treatment and may not be performed in the months indicated here.

Turn over for more details!

We Listened!

1 All in 1 Program

We listened to our customers and learned that their time is of a premium. So we came up with this easy, comprehensive pest control program that you don't even have

to think about!

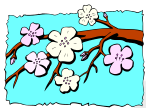

What is the All-in-One Program?

With the All-in-One Program, your home will be protected against 32 common pests encountered in our area plus termites. (Check out the list to the right.) The every-other-month service in this program insures that your house will be continually protected through all four seasons. Of course, if you have a pest problem in between services, you can always call and we'll be right out!

Our easy-pay feature allows you to pay monthly through our convenient autopay system so your payment is charged to your credit card.

You're protected during every season of the year

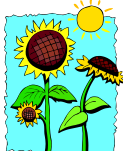

Spring – Emerging Pest Prevention

Pests emerge and gain entry into your home in the Spring. With the All-in-One Program, you'll get a careful

inspection and treatment for spring pests and treatment (if necessary) for swarming termites.

Summer – Pest

Management

This service focuses on managing and eliminating pests. Includes an exterior perimeter treatment and spider

web removal.

- Wasps, at ground level

Our Best Tools

Premise-G

We use a new product, Premise G, that is the only EPA registered product to allow for annual termite preventive treatments. Premise G can add an extra zone of protection around your home. Applied annually, it eliminates termites before they become a bigger problem. Premise G is a granular product manufactured by Bayer and is applied annually around your home for enhanced termite protection.

Advance Termite Bait System

The revolutionary Advance Termite Bait System, proven to eliminate termite colonies in and around your home, offers advantages and long-term protection of your home. We have selected the Advance System because we believe it offers the best in termite control.

The bait stations have a low profile so they do not extend above ground and get in the way of mowers and lawn equipment.

- Each station has a quick-lock cap designed to minimize tampering by children and pets.
- Each station contains cellulose because termites prefer it to the wood in your home.
- If we detect termite activity in a station, we apply enough bait to eliminate the termite colony around your home.

Fall – Pest Management

The fall treatments focus on pests that seek harborage from cooler weather ahead.

Winter – Interior Pest & Rodent Control

Though you may not think you need pest control in the winter, monitoring your home for any pest activity is vital in maintaining a pest-free home. We monitor closely for rodent activity and keep a careful watch for termite activity during the winter.
